Anti)Mite

Micro Organisms, **Macro Problems**

Mites are with us in all of our living spaces. These tiny organisms that we can only see with a microscope may normally be perceived as harmless but various effects they present can cause different kinds of discomfort including allergies.

Dust Mites

Dust mites can easily spread around by moving with the dust in their environment. Their waste, which is also highly allergenic, can also move around in the air as dust. Where they live are surfaces like beds, arm chairs and carpets.

In such spaces they reproduce quickly by feeding off the microscopic dead skin particles shed by people and pets.

A Technological Solution

A variety of methods and chemicals are developed to get rid of mites, but it is possible to prevent them even before they settle into upholstery fabric.

The easiest way to do this is to use **Weavers's Anti Mite** fabrics.
